DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nesbitt (4,431,193). Nesbitt discloses a dimpled golf ball comprising a core, an intermediate layer, and a cover. The cover has a thickness from 0.020 to 0.1 inch or 0.5-2.54 mm. The intermediate layer has thickness from 0.020 to 0.070 inch or 0.5-1.78 mm. The golf ball has a diameter of 1.68 inches ($V=40.6 \text{ cm}^3$) and a weight of 1.62 ounces (45.9 g). The density equals 1.13 g/cm^3 . The method of making the cover does not appear to change the structure of the golf ball MPEP 2113. One of ordinary skill in the art would vary the ranges for the weight and diameter for enhanced flight performance.

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nesbitt (4,431,193) in view of Inoue et al (6,346,053). Nesbitt discloses a dimpled golf ball but does not disclose the volume of the dimples. However, Inoue teaches a dimple volume from 0.5-1.2%. With respect to the ratio of the CL/CD, the features are obvious over Nesbitt in view of Inoue since the claimed structure and dimple volume is

disclosed. One of ordinary skill in the art would have modified Nesbitt in view of Inoue for enhanced flight.
